PAPER 5		
Foundation Tier		
Foundation Her		
You must have:		Total Marks
Calculator, ruler		Total Marks
Carcarator, Farce		

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
 - there may be more space than you need.
- Calculators may be used.
- Any diagrams may NOT be accurately drawn, unless otherwise indicated.
- You must show all your working out with your answer clearly identified at the end of your solution.

Information

- The total mark for this paper is 60.
- The marks for each question are shown in brackets
 - use this as a guide as to how much time to spend on each question.
- In questions marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- There is a periodic table on the back cover of the paper.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Turn over ▶

BLANK PAGE

Answer ALL questions. Write your answers in the spaces provided.

Some questions must be answered with a cross in a box ⊠. If you change your mind about an answer, put a line through the box ⋈ and then mark your new answer with a cross ⋈.

- 1 This question is about elements in group 1 of the periodic table.
 - (a) Figure 1 shows the symbols of the first three elements in group 1 of the periodic table and their melting points.

symbol	melting point in °C
Li	181
Na	98
К	64

Figure 1

Use the periodic table to answer these questions.

(i) Give the symbol of **another** element in group 1.

(1)

(ii) Give the atomic number of lithium.

(1)

(iii) Describe the trend in the melting points of the elements in Figure 1.

(2)

(b) The elements in group 1 react very vigorously with water.

A student suggests this method to see what happens when sodium reacts with water.

- **step 1** put on safety glasses and a laboratory coat
- step 2 cut a $2 \text{ cm} \times 2 \text{ cm} \times 2 \text{ cm}$ cube of sodium
- **step 3** put a few drops of water in the container shown in Figure 2
- **step 4** add the sodium to the water in the container and observe the reaction
- (i) Figure 2 shows a diagram of the container the student suggested for step 3.

Figure 2

Give the name of the container shown in Figure 2.

	(Total for Question 1 = 8 ma	rks)
	step 3: change and explanation	
	step 2: change and explanation	
	the method safer.	(3)
	Explain changes that could be made to step 2 and to step 3 that would make	
(ii)	A teacher says that the method is not safe because the reaction is too vigorous.	

- **2** Some reactions are exothermic and some reactions are endothermic.
 - (a) What does an exothermic reaction always give out?

(1)

- A heat energy
- B light
- D sound
- (b) In an experiment, a solid is mixed with a liquid.

 The temperature change of the mixture is measured.

Figure 3 shows the apparatus that is used.

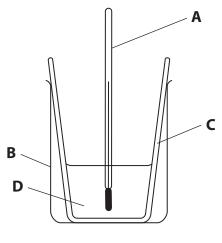

Figure 3

(i) Give the letter of the piece of apparatus, **A**, **B**, **C** or **D**, in Figure 3 that is used to measure the temperature.

(1)

(ii) Give the name of the piece of apparatus **B** shown in Figure 3.

(1)

(iii) The piece of apparatus labelled **C** is made from polystyrene.

State why polystyrene is a better material than glass for this piece of apparatus.

(iv) The results of the experiment are given in Figure 4.

temperature of liquid at start in °C	18.6
temperature of products at end in °C	16.1

Figure 4

Calculate the change in temperature.

Give a sign and a unit in your answer.

(3)

temperature change =

(v) The solid used in this experiment contained only NH_4^+ ions and NO_3^- ions.

Give the formula and the name of the solid.

(2)

formula

name

(Total for Question 2 = 9 marks)

3 (a) Figure 5 shows one molecule of a compound obtained from crude oil.

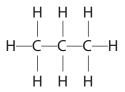

Figure 5

(i) Give the names of the **two** elements in this molecule.

(2)

(ii) What is the molecule in Figure 5?

(1)

- **A** an oxide
- **B** a chain molecule
- **C** a fullerene
- **D** a ring molecule

(iii) What is the relative formula mass of the compound in Figure 5?

(relative atomic masses: H = 1.0, C = 12)

- B 42
- □ 96

raw one straight line from each frac	tion to a use of that fraction. (3)
fraction	use
	• fuel for aircraft
petrol	• fuel for ships
kerosene •	• fuel for cars
Refosenc	• making plastic
bitumen	• extracting iron
	• making road surfaces
water. ue litmus paper is dipped into each	xide gas are dissolved in separate test tubes test tube. you would observe in each test tube. (3)

- **4** This question is about elements in group 7, the halogens.
 - (a) Which halogen is a green gas at room temperature and pressure?

(1)

- **A** bromine
- **B** chlorine
- **C** fluorine
- **D** iodine
- (b) Bromine, chlorine and iodine all react with heated iron wool.

Figure 6 shows the speed of these reactions.

halogen	description of reaction with heated iron wool
bromine	reacts quickly
chlorine	reacts very quickly
iodine	reacts slowly

Figure 6

(i) When iron wool is heated with chlorine, iron chloride is formed.Write the word equation for this reaction.

(2)

(ii) Give the name of the halogen in Figure 6 that is the most reactive with iron.

(11)	•	the mass of iron			ne in 125 g of iroi	n chlorido

5 A student used the apparatus in Figure 7 to investigate the rate of the reaction between a metal and dilute hydrochloric acid.

Pieces of the metal were placed in dilute hydrochloric acid in the flask, and the total volume of gas produced was measured every minute.

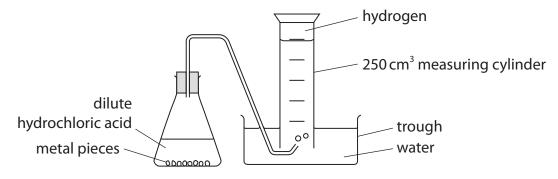

Figure 7

(a) Figure 8 shows a graph of the student's results.

volume of hydrogen in cm³

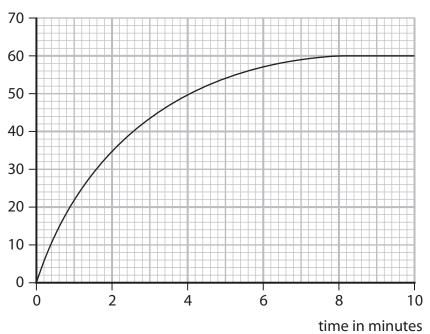

Figure 8

	(i)	Name a piece of apparatus that would be better to measure the volume of gas produced, instead of the 250 cm ³ measuring cylinder. Give a reason for your answer.	5
		name of apparatus	(2)
		reason	
	(ii)	Calculate the mean rate of production of hydrogen over the first 90 seconds, in cm³ per second.	(3)
		rate =cn	n ³ ner second

BLANK PAGE

- **6** This question is about gases.
 - (a) When sodium is added to water, hydrogen gas is produced.

Which observation shows that a gas has been produced?

(1)

- A a white precipitate forms
- **B** effervescence is seen
- C the sodium sinks in the water
- **D** the water changes to a pink colour
- (b) Some damp litmus paper is placed in a gas. The litmus paper is bleached.

Which gas bleaches damp litmus paper?

(1)

- A carbon dioxide
- **B** chlorine
- D oxygen
- (c) When calcium carbonate is heated it decomposes.

$$CaCO_3(s) \rightarrow CaO(s) + CO_2(q)$$

When 5.000 g of calcium carbonate is heated, the mass of solid remaining is 2.800 g.

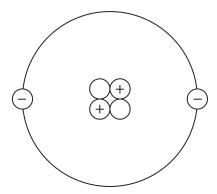

Calculate the mass of carbon dioxide that has been released.

Give your answer to three significant figures.

(2)

mass of carbon dioxide =g

(d) A diagram of an atom of helium is shown in Figure 9.

Key

= electron

= neutron

+ = proton

Figure 9

(i) Explain, using Figure 9, why helium is inert.

(2)

(ii) Helium is used to fill balloons.

State one property of helium, apart from it being inert, that makes it suitable for filling balloons.

(6)

*(e) Figure 10 shows the relative amounts of three gases in the early atmosphere compared to the composition of today's atmosphere.

gas	relative amount in early atmosphere	composition of today's atmosphere	
water vapour	large amount	0% to 4%	
carbon dioxide	large amount	less than 0.5%	
oxygen	little or none	21%	

Figure 10

Natural processes and human activities have altered the relative amounts of these gases in the atmosphere.

Explain how the relative amount of each of the gases in Figure 10 has increase	d or
decreased over time.
